Internal morphology. Insects have several internal organ systems.

The nervous system is advanced and includes a brain, a ventral nerve cord, ganglia, and peripheral nerves. The digestive system is composed of a foregut, midgut, and hindgut. Insects digestive systems are unique in that they have Malpighian tubules.

Dictionary of Insect Morphology from Summerfield Books

Insect morphology is the study and description of the physical form of insects. The terminology used to describe insects is similar to that used for other arthropods due to their shared evolutionary history.

Three physical features separate insects from other arthropods: they have a body divided into three regions (head, thorax, and abdomen), have three pairs of legs, and mouthparts located ...

Insect morphology - Wikipedia
