IFRS adoption and endorsement in the EU. On 19 July 2002 a regulation was passed by the European Parliament and the European Council of Ministers requiring the adoption of IFRS: Regulation (EC) No 1606/2002 of the European Parliament and of the Council of 19 July 2002 on the application of international accounting standards. As a result of the Regulation, all EU listed companies were required to prepare their financial statements following IFRS from 2005.

To my knowledge, this is the first empirical research to investigate the impact of IFRS adoption on the financial statements of listed Oil and Gas companies. The study will therefore make an enormous contribution to academic literature and body of knowledge and void the existing knowledge gap regarding the impact and implications of IFRS adoption on the financial statements of Oil and Gas ...

Effects of IFRS adoption on the financial statements of ...

The IFRS Foundation was established to develop a single set of globally accepted accounting standards. It is the organisation behind IFRS Standards-financial reporting standards required for use by more than 140 jurisdictions.

IFRS

International Financial Reporting Standards (IFRSs) are accounting standards and interpretations published by the International Accounting Standards Board (IASB). IFRSs have been adopted by many jurisdictions worldwide, including the EU.

XBRL tagging of financial statements is like 'barcodes for financial reporting'. Inline XBRL (iXBRL) is a form of XBRL technology that allows us to create a document that is human readable but also shows the tagging embedded in the financial statements. Here is a slide showing the IFRS Foundation's annual report tagged using inline XBRL.

Abstract. This research aims to evaluate whether there are any increasing in financial reporting quality after the IFRS adoption using the qualitative approach being developed by Nijmegen Centre for Economics (NiCE). This research is using paired sample test to analyze the data. The financial reporting quality before the IFRS adoption is represented by the period 2009–2010, while the financial reporting quality after the IFRS is represented by the period 2012–2013.

Financial Reporting Quality - Before and After IFRS ...

Abstract This study examines financial reporting quality (FRQ) effects around voluntary International Financial Reporting Standards (IFRS) adoptions by German private firms across two important dimensions, earnings quality and disclosure practices.

IFRS adoption, reporting incentives and financial ...

If IFRS impairs financial reporting quality subsequent to its adoption in 2007, we expect the association between CAR_{it} and unexpected earnings $(X_{it} - X_{it-1})/P_{it-1}$ to be lower during the two years after IFRS adoption, consistent with a negative coefficient on $POST_{it} * (X_{it} - X_{it-1})/P_{it-1}$ ($\beta_5 < 0$).

Conventional and commonly held wisdom with respect to the adoption of International Financial Reporting Standards (IFRS) is that they lead to improved financial reporting quality and comparability and thereby favorable economic consequences. There are however contradicting evidences disproving this conventional wisdom or rejecting its gross generalization over the entire jurisdictions harmonizing on IFRS. Driven by this fact, quests for knowledge about the dynamics and contexts that lead to differential effects of IFRS get momentum. In an attempt to explore the insight into the effects of international accounting harmonization by way of IFRS adoption, this paper reviews selected literatures on consequences of IFRS adoption. This review discusses some empirical evidences that have been reported in various countries that include Europe, USA, United Kingdom, Germany, Spain, Norway, Greece, Poland, Belgian, France, Italy, Turkey, United Arab Emirates (UAE), Kuwait, Jordan, China, Malaysia, Australia, Hong Kong, New Zealand, Kenya and Nigeria. Our review focuses on the aspects of value relevance, disclosure quality, cost of capital, earning management and financial statement impact due to the IFRS adoption. This review reveals that economic consequences of IFRS adoption significantly differ across jurisdictions though being its impact reported to be positive in majority of cases. There are also notable number of studies that report indifferent and or negative effects of IFRS adoption. When IFRS studies report mixed

evidence with respect to value relevance of book value of equity and earnings, book value of equity supersedes the earnings parameters. IFRS are found to supersede many other domestic financial reporting standards in terms of volume and quality of disclosures in financial statements. This review also obtains that IFRS' impact on the reduction of cost of capital depends on financial reporting incentives, law enforcement, types of legal systems and various other country and capital market specific characteristics. Further, though there are some evidences to the contrary, the quality of earnings reported under IFRS has been established to be superior to that under other local standards.

This study examines whether mandatory adoption of International Financial Reporting Standards (IFRS) leads to capital market benefits through enhanced financial statement comparability. UK domestic standards are considered very similar to IFRS (Bae et al. 2008), suggesting any capital market benefits observed for UK-domiciled firms are more likely attributable to improvements in comparability (i.e., better precision of across-firm information) than to changes in information quality specific to the firm (i.e., core information quality). If IFRS adoption improves financial statement comparability, we predict this should reduce insiders' ability to benefit from private information. Consistent with these expectations, we find that abnormal returns to insider purchases--used to proxy for private information--are reduced following IFRS adoption. Similar results are derived across numerous subsamples and proxies used to isolate IFRS effects attributable to comparability. Together, the findings are consistent with mandatory IFRS adoption improving comparability and thus leading to capital market benefits by reducing insiders' ability to exploit private information.

International Financial Reporting Standards (IFRS) Workbook and Guide is a one stop resource for understanding and applying current International Financial Reporting Standards (IFRS) and offers: Easy-to-understand explanations of all IFRSs/IASs and IFRICs/SICs issued by the IASB/IASC up to March 2006 Illustrative examples Practical insights Worked case studies Multiple-choice questions with solutions Technically reviewed by Liesel Knorr, Secretary General of the German Accounting Standards Committee and former technical director of the International Accounting Standards Committee (IASC). Forewords by: Sir David Tweedie, Chairman of the International Accounting Standards Board (IASB) Philippe Richard, Secretary General of the International Organization of Securities Commissions (IOSCO)

An extensive number of empirical studies have been devoted to the adoption of IFRS but the results have been inconclusive. We use a meta-analysis of 42 empirical studies with 68 independent samples to determine whether IFRS adoption has impacted on financial reporting comparability, market liquidity, and the cost of capital. This approach provides a logical and objective view of the empirical results, in contrast to narrative reviews which offer subjective conclusions. We find that IFRS adoption has significantly increased financial reporting comparability and market liquidity, and reduced the cost of capital. However, our assessment of sources of heterogeneity shows that the above relationship is moderated by differences in modes of adoption, peculiarities in legal systems, the divergence of local GAAP from IFRS, and the level of standards and regulatory enforcement of the country in which a firm operates. This study is beneficial to regulators and policymakers of jurisdictions that are considering the adoption of IFRS.

Thesis (M.A.) from the year 2018 in the subject Business economics - Accounting and Taxes, grade: 2, Addis Ababa University, course: MBA in Finance, language: English, abstract: The study aims to examine the challenges and prospects of International Financial Reporting Standards (IFRS) adoption in Ethiopian Commercial Banks. To answer the research question and to achieve the objective of the study this paper adopted the mixed research approach. The questionnaire data were analyzed using descriptive statistics and data from interview and document review were interpreted qualitatively. The results show that IFRS adoption in Ethiopian Commercial Banks will result in a number of important benefits to a wide range of stakeholders. The study also found out that with the exception of capital market the other five variables namely need of amending legal and regulatory requirement, volatility of financial position and financial performance, difficulty of obtaining source documents and data, need of updating the existing accounting software, information system and information technology of the bank, shortage of skilled and competent man power, shortage of strong professional bodies are the key challenges of IFRS adoption in Ethiopian Commercial Banks. Finally the study recommended the relevant commercial code, tax proclamation and NBE directive should be amended by Government organs in consultation with strong professional bodies, establishment of strong professional bodies and capital market, allocation of sufficient financial and other resources by top management, introduction of IFRS in colleges and universities and future adopters should think ahead the required source documents and data as well as ensure the extent of changes needed to update the existing IT infrastructure to satisfy IFRS requirements.

?Despite having an underdeveloped supporting infrastructure and limited resources, Kazakhstan was the first CIS country to require international financial reporting standards in 2004 for banks, and in 2005 for all public companies. What were the economic consequences of this important reform? In the 1990s, Kazakhstan's capital market reforms mirrored those of Russia due to the two countries' cooperating mode driven by a high level of resource interdependence and environmental uncertainty, following the collapse of the Soviet Union. Yet, by 2003, dependence on external donors (the IMF, World Bank) took precedence over interdependence with Russia. As a result, Kazakhstan unilaterally proceeded with adoption of IFRS,

while Russia backed up from this initiative. This study reports that Kazakhstan's inflow of foreign direct investments was the greatest among the CIS nations following the adoption of IFRS. In addition, in 2005-11, Kazakhstani public firms' reporting quality was higher than that of the Russian public firms operating in a similar environment but exempt from the IFRS reporting requirement. Kazakhstan was the first CIS nation to repay its external debt ahead of schedule and to receive an investment grade from Moody's rating agency. The book concludes that Western-style capital market reforms—in this emerging market with a not-so-distant communist past—had significantly positive outcomes.?

This study examines financial reporting quality (FRQ) effects around IFRS adoptions of German private firms across two important dimensions, earnings quality and disclosure practices. To capture differences in the motivations for IFRS adoptions, we identify four different types of adopting firms based on a comprehensive set of firm characteristics. We observe earnings quality improvements around IFRS adoptions primarily for one type of firms, which are young, fast growing and seeking access to public equity markets. Using a matched sample of private German GAAP and IFRS reporting firms, we find some evidence suggesting that IFRS also contribute to higher earnings quality. Recognizing that our earnings quality metrics are only incomplete measures of FRQ, we also compare the disclosure practices of IFRS and German GAAP firms. We find that all IFRS firm types disclose significantly more information in their financial reports and show a higher propensity to voluntarily publish their financial reports on the corporate website. Our findings indicate that failure to identify earnings quality changes around IFRS adoption cannot be automatically interpreted as IFRS adoption having no effect on the FRQ of (private) firms. Collectively, our results suggest that both incentives and accounting standards shape private firms' FRQ.

Contributions to International Accounting aims to address a vital gap in research by focusing on providing relevant and timely studies on International Financial Reporting Standards implementation for local and international policymakers.
