For those wishing to acquire knowledge on national development issues, this comprehensive compendium traverses a spectrum of subjects that the audience ought to be well acquainted with. The Editors provide instructive findings regarding national development, economic growth and their determinants, but they also offer historical perspectives on the subject and the implications for developing countries. The book addresses a suite of critical themes regarded by development experts to be germane in considering the pertinence of policies and their effective execution. These seven general thematic areas are explored: ¶ Leadership, governance, policy and strategy ¶ Public sector and public financial management ¶ Culture, institutions and people ¶ Natural resources ¶ Science, technology and infrastructure ¶ Private sector and financial markets ¶ Marketing, branding and service delivery This thematic approach enables the contributors to explore the impact of the constituents of each subject area on national development, within the context of a developing economy. The significance of the findings for the relevant stakeholders is consequently reviewed. The combination of theory and practice makes the book and its contents unique.

Evidence indicates that actions within four main themes (early child development, fair employment and decent work, social protection, and the living environment) are likely to have the greatest impact on the social determinants of health and health inequities. A systematic search and analysis of recommendations and policy guidelines from intergovernmental organizations and international bodies identified practical policy options for action on social determinants within these four themes. Policy options focused on early childhood education and care, child poverty, investment strategies for an inclusive economy, active labour market programmes, working conditions, social cash transfers, affordable housing, and planning and regulatory mechanisms to improve air quality and mitigate climate change. Applying combinations of these policy options alongside effective governance for health equity should enable WHO European Region Member States to reduce health inequities and synergize efforts to achieve the United Nations Sustainable Development Goals.

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"...

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community it does not mean they are intractable; such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The author presents an empirical study on Vietnam's national competitiveness by using mixed methods research (qualitative and quantitative) with a combination of hard and soft data. The result shows that production resources (human, infrastructure, capital and natural resources) have played the most important role in improving competitiveness, productivity and living standard in Vietnam in the last two decades. The author also analyzed and evaluated the competitiveness of the Vietnamese economy, and pointed out the remaining weaknesses of competitiveness compared to the selected regional countries such as shortage of production resources supply, a dominance of inefficient state-owned enterprises and its slow reform, and weak public institutions as well as inefficient government governance. These weaknesses have led Vietnam's competitiveness, productivity and economic growth to remain low, especially compared to China. Finally, the author attempts to provide some recommendations enhancing the competitiveness, productivity, and citizens' living standard in Vietnam in the long term.

This book addresses the rising productivity gap between the global frontier and other firms, and identifies a number of structural impediments constraining business start-ups, knowledge diffusion and resource allocation (such as barriers to up-scaling and relatively high rates of skill mismatch).

The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses the need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

Summarizes recent research from hundreds of empirical studies on economic growth across countries that have highlighted the correlation between growth and a variety of variables.
