Urethane Single Stage Paints
When urethane paints are
applied in stages, the last
stage is applying the "clear
coat" or layer of protector
design to add to the sheen
of the paint and protect it
from damage. This is not
part of the urethane
process, but it is common
even with single-stage

Industries on the process of wet sanding and buffing or wheeling out new paint from start to finish. <https://www.youtube.com/channel/UCCRd-C...>

How to Wet Sand and Buff New Paint - Single Stage or BC/CC

Single stage urethanes can definitely be wet-sanded, and you actually can wet-sand a base coat before shooting the clear--a lot of people don't know that you can do that." Urethane paints do contain isocyanates, toxic compounds that are absorbed into the body through the lungs and through the skin, and so

Industries mixed in a 4:1:1 ratio with a hardener and reducer. The original hardware on this piece is so good!

Automotive Paint On Furniture - Painted by Kayla Payne

Urethane primers come in a standard and high-build variety. Urethane primers also have great filling qualities. Follow the instructions for mixing and flash times (dry times in between coats). Primer surfacers shrink when flash times (usually 5 to 10 mins) are ignored. Do not use a hardener meant for one product with a different product.
