Overview Cell Reproduction Answers

Answer: D Cellular

Access Free Overview Cell

Reproduction in multicellular organisms occurs through the process of mitosis. The purpose of mitosis is to form new somatic cells. Somatic cells are those cells that form the body of an organism. Germ cells (e.g. sperm and ova) are not somatic cells and are formed through the process of meiosis, not mitosis.

cycle, the cell grows, duplicates its DNA, and divides by pinching in the cell membrane. □

The eukaryotic cell cycle has four stages (the first three of which are referred to as interphase): □ In the G

10.1 Cell Growth, Division, and Reproduction

Remember, whereas

Access Free Overview Cell

mitosis was involved in forming diploid somatic cells, meiosis results in the production of haploid germ cells. This difference in function between meiosis and mitosis results in a very different process of reproduction. Meiosis is marked by two nuclear divisions, as opposed to the one division found in mitosis.
