II, Methods for Load Analysis, describes useful methods and indicates how and when they should be used. Part III, Load Analysis in view of the Vehicle Design Process, offers strategies for the evaluation of customer loads, in particular characterization of customer populations, which leads to the derivation of design loads, and finally to the verification of systems and components. Key features:

- Is a comprehensive collection of methods for load analysis, vehicle dynamics and statistics
- Combines standard load data analysis methods with statistical aspects on deriving test loads from surveys of customer usage
- Sets the methods used in the framework of system dynamics and response, and derives recommendations for the application of methods in engineering practice
- Presents a reliability design
