Hess's law and temperature dependence of equilibria Within chemical engineering, it is important to be able to understand whether a process gives out heat when a reaction occurs or whether there is a need to supply heat to the process. It is also useful to have some information about the magnitude of the energy involved. In order to achieve these two aims chemical engineers can calculate the ...

The phase rule is a general principle governing "pVT systems" in thermodynamic equilibrium, whose states are completely described by the variables pressure (p), volume (V) and temperature (T). If F is the number of degrees of freedom, C is the number of components and P is the number of phases, then
$$F=C-P+2.$$
