~~Programming Coldfusion~~

Regardless of the cause of the problem, ColdFusion deals with undeliverable email in a consistent and simple manner. All undeliverable email messages are written to temporary files and saved to a folder on the ColdFusion server called Undelivr. The Undelivr folder is usually located in c:\cfusion\mail\undelivr\. The exact location can be determined by looking at the following value in the system registry:

~~Dealing with Undeliverable Email - Programming ColdFusion ...~~

ColdFusion executes the statements in the default block if none of the case statement constants equals the expression value. The default statement does not have to follow all case statements, but it is good programming practice to do so.

~~Using CFScript statements - Adobe Inc.~~

The ColdFusion Markup Language (CFML) is the language that you use to create ColdFusion applications. CFML is a tag-based language, just like HTML. You use it in conjunction with HTML and other client-side languages, such as JavaScript and VBScript, to create the templates that make up a ColdFusion application.
