Sugarcane or sugar cane refer to several species and hybrids of tall perennial grass in the genus Saccharum, tribe Andropogoneae, that are used for sugar production. The plants are two to six metres (six to twenty feet) tall with stout, jointed, fibrous stalks that are rich in sucrose, which accumulates in the stalk internodes.

Sugarcane—Wikipedia

Sugarcane, (Saccharum officinarum), perennial grass of the family Poaceae, primarily cultivated for its juice from which sugar is processed. Most of the world’s sugarcane is grown in subtropical and tropical areas.

Sugarcane | plant | Britannica

Sugarcane (Saccharum spp.) is cultivated in the tropics primarily for its high sugar (sucrose) content. Recent concerns about climatic change and the search for alternatives to fossil fuels, has focused global attention on sugarcane as a source of biomass.

Sugarcane is a water-intensive crop that remains in the soil all year long. As one of the world’s thirstiest crops, sugarcane has a significant impact on many environmentally sensitive regions, like the Mekong Delta and the Atlantic Forest. Historic planting of sugarcane around the world has led to significant impacts on biodiversity.
