Flower healing is the simple and natural method of healing through personality by means of wild flowers, discovered by the late Dr Edward Bach, MB, BS, MRCS, LRCP, DPH. He was a great physician who combined compassion for all who suffer, with a deep love for Nature, her trees and plants. Dr Bach practised for many years as a Harley Street consultant and bacteriologist but gave up his lucrative practice in 1930 to devote his full time to perfecting this system of healing described in full in his booklet The Twelve Healers and Other Remedies. Nora Weeks and Victor Bullen worked with Dr Bach and it was to them that the responsibility of his work was bequeathed. In 1964, as a tribute to the doctor's work they published this book to share with others the essence of Nature within the Bach Flower Remedies. This new edition, with coloured photographs, was published in 1990 and then revised and reprinted in

1998.

Examining Complementary Medicine is one of the first books to take a critical look at complementary medicine from the inside, with contributions from leading figures in this growing field of interest. Until recently, criticism and analysis of complementary therapy has come exclusively from orthodox medicine, but with the widespread adoption of complementary therapies within conventional medical therapeutic practices, the time is now right for critical self-analysis on the part of practitioners within complementary therapies. Andrew Vickers has assembled leading figures to discuss the major concepts of complementary medicine and to expose hitherto hidden flaws in the reasoning and knowledge thought to underpin complementary medicine. The controversial nature of some of the contributions is intended to provoke further critical analysis within the professions, and it is hoped that the book will contribute to an intellectually rigorous theoretical basis for complementary practice.
